Application/Control Number: 10/594,495 Page 2

Art Unit: 1796

## **DETAILED ACTION**

## Election/Restrictions

6. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-20 and 22-24, drawn to a film-forming apparatus.

Group II, claim(s) 21, drawn to a film-forming apparatus.

Group III, claim(s) 25-32, drawn to an apparatus for processing under a depressurized condition.

Group IV, claim(s) 33-49, drawn to a film-forming method.

Group V, claim(s) 50-53, drawn to an electronic device.

7. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common subject matter among these inventions, i.e., a film-forming apparatus, has been disclosed in Baldo et al. (Mat. Res. Soc. Symp. Proc. Vol. 488, December 1<sup>st</sup> 1997, pages 587-592, provided in the IDS filed 09/22/2009). Thus, corresponding to the apparatus recited in claim 1, Baldo et al. discloses an apparatus for deposition of organic thin films via low-pressure organic vapor phase deposition (Abstract). The apparatus (Figure on p. 588) comprises a pyrex reactor tube directly coupled to a vacuum line equipped with a

pressure gauge. The reactor tube is directly coupled to four feeder tubes, one of which is used to flush the system with nitrogen gas and to control the pressure of the system. Inside each of the three remaining feeder tubes is positioned a glass boat which contains a film-forming material. The glass boats are moved within the feeder tubes using glass push rod valves and mass flow controllers so as to control the temperature and sublimation rates of the film-forming materials. It is noted that the film-forming material is contained in boats which are made of glass, a material having a low catalytic effect. Clearly, the prior art apparatus has all the features recited in claim 1. The common subject matter in Groups I-V is not novel. Consequently, there is no special technical feature joining the inventions and, as a result, the inventions are not considered to be unified by a single general inventive concept.

8. A telephone call was made to George C. Beck on 01/08/2010 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Application/Control Number: 10/594,495

Art Unit: 1796

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Page 4

10. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result

Application/Control Number: 10/594,495 Page 5

Art Unit: 1796

in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vu Nguyen whose telephone number is (571)270-5454. The examiner can normally be reached on M-F 7:30-5:00 (Alternating Friday Off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on 571-272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
